

# T1, CANOPY

*Whatever the weather, under the T1 you can always load and unload dry.*

The T1 is mainly used for dry loading and unloading. Transport companies and storage and transshipment companies are parties that often purchase or rent a T1. With a side height of up to 4.5 meters, trucks and trailers can easily pass under the canopy.

By default, the T1 comes without a floor. The canopy can be placed on (almost) any floor ground using ground pins. Still need a floor? No problem, you can choose from a system floor, cassette floor or a floor of stelcon plates.

**Width:**  
2,5 - 30 meter

**Length:**  
Unlimited extension of 5 meters

**Side Heights:**  
2,3 meter | 3 meter | 4,5 meter

**Roofing:**  
Opaque PVC tarpaulin 750 gr/m<sup>2</sup>

**Aluminium:**  
Quality Class 6082T6

## PROTECT GREEN BEANS AGAINST BIRDS

Dinteloord (NL) | 2x 15x20 meter | 4,5 meter side height | Side sails

Primeale United (formerly Van Oers United) in Dinteloord (NL) made a request to us for a small closed tent to store a container of green beans under. During the site visit we measured everything and they also wanted advice on additional canopies.

For a new vegetable system, Primeale United needed two large canopies. This system needed to be dry and roofed to protect the vegetables from the birds and mainly bird droppings. We then immediately measured the location for the canopies and provided a quote.

With a side height of 4.5 meters, it is possible for the trucks under the tent to place their container in the system and the container can be pushed up to unload the vegetables. When the container is up, it fits exactly. There are side curtains in some of the walls so that the birds do not fly underneath.
